

Need-targeted harvesting on the reused development panel

Zero or two needs of soft reserve · unchanged physical engine · saved v2 comparisons

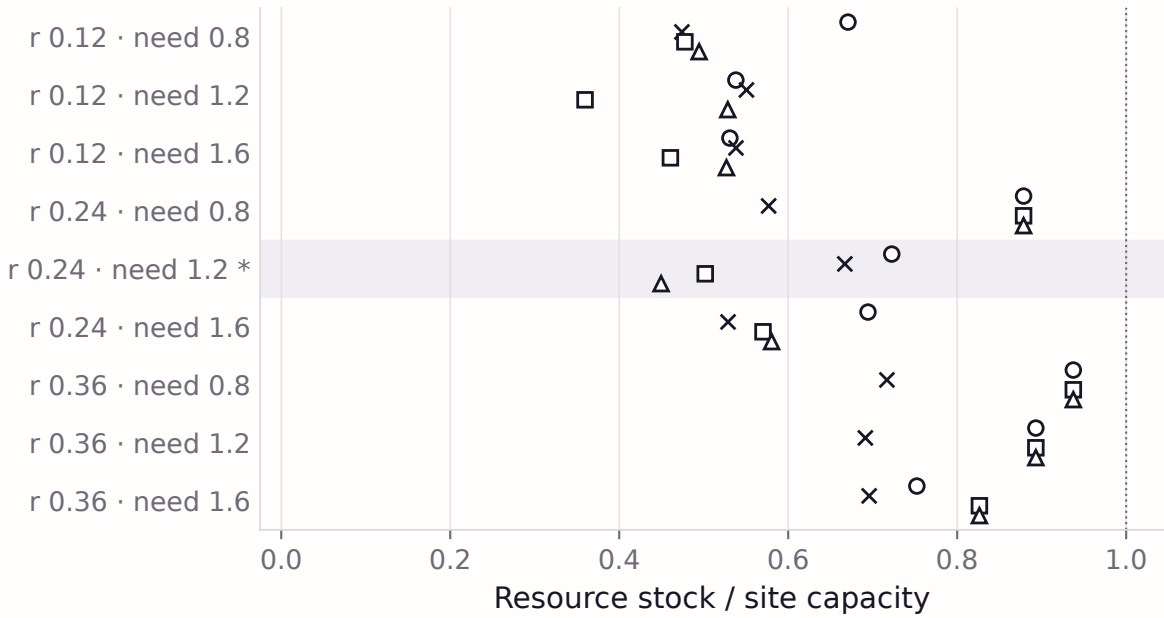

A Population consumption

Four paired seeds per cell; separate markers prevent overlap

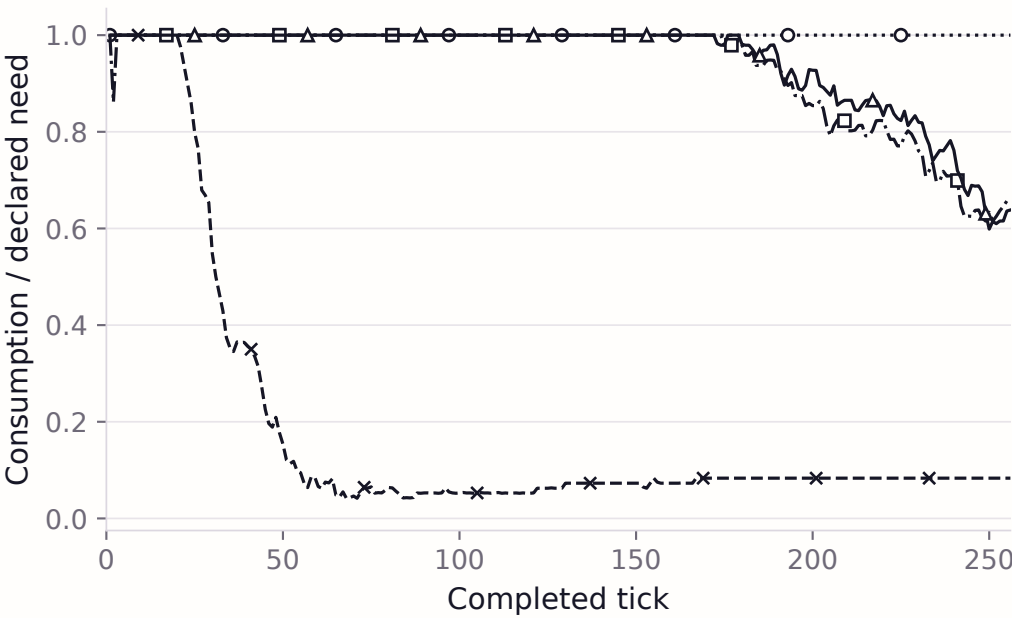

B Terminal ecological stock

Four paired seeds per cell; separate markers prevent overlap

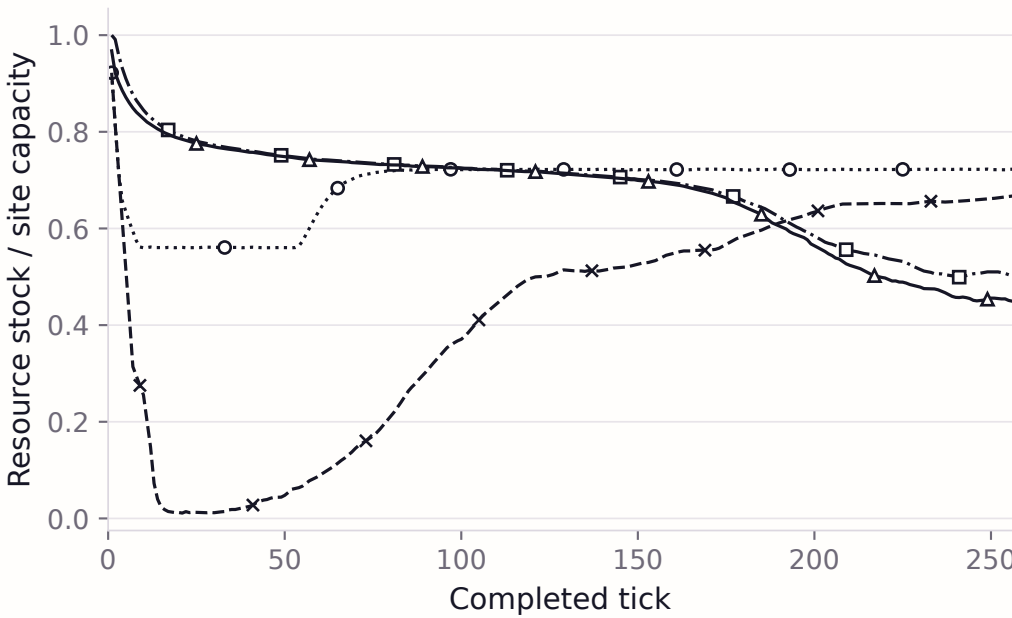

C Reference consumption trajectory

r 0.24 · need 1.2 · means of four recorded seeds

D Reference ecological trajectory

r 0.24 · need 1.2 · means of four recorded seeds

····○···· Saved v2 restraint -·□-·- Need-targeted · reserve 0
--×-- Saved v2 greedy —△— Need-targeted · reserve 2

* Shaded reference row. Same 56 configurations and four reused seeds per bank; 224 new and 224 previously saved episodes.

Consumption loss and global ecological stock are distinct. Curves show recorded tick means without smoothing.

Exploratory development, not independent qualification. Zero evolutionary runs or experimental model calls.
