

One focal individual switches from need-targeting to greedy

Identical paired physical starts · peers retain the named baseline · descriptive ranges over four reused seeds

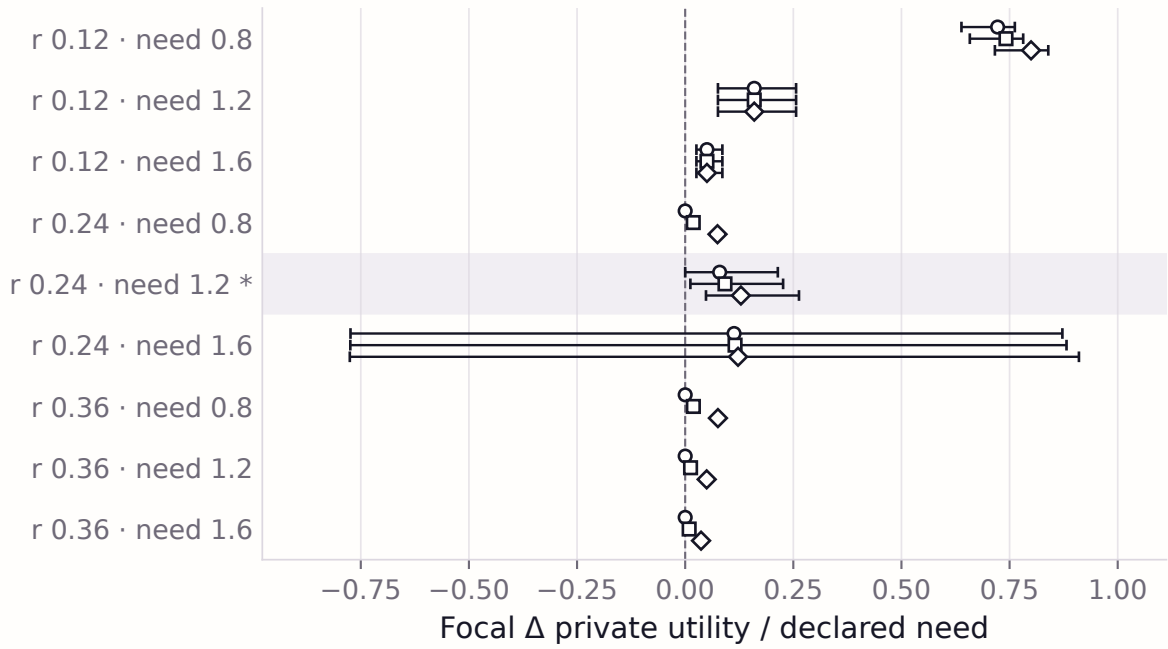

A Focal private utility · reserve 0

Mean and observed min-max; these are not confidence intervals

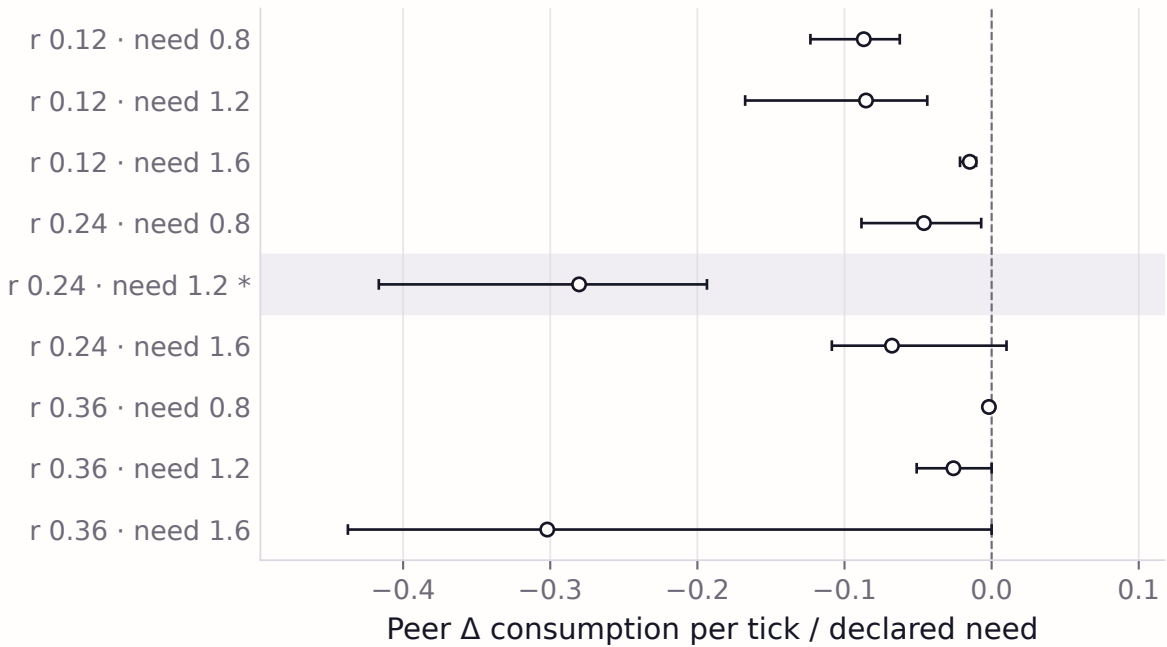

B Focal private utility · reserve 2

Mean and observed min-max; these are not confidence intervals

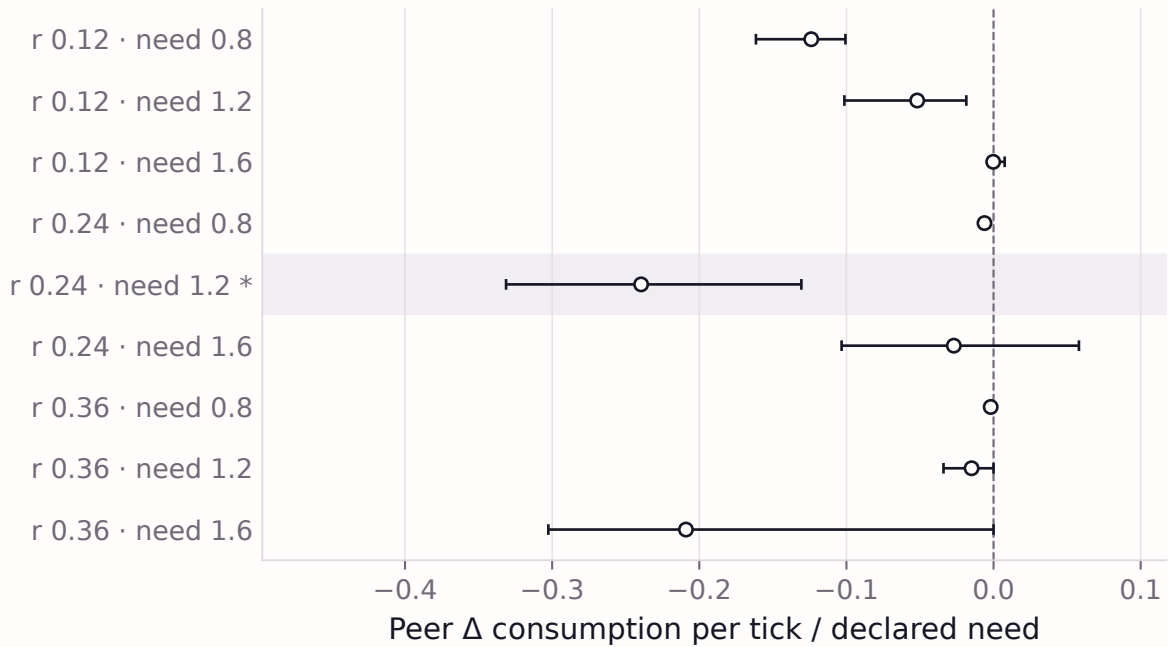

C Peer consumption · reserve 0

Average over the 23 peers, then paired across four seeds

D Peer consumption · reserve 2

Average over the 23 peers, then paired across four seeds

○ Wealth weight 0 □ Wealth weight 0.05 ◇ Wealth weight 0.2

* Shaded reference row. Utility = (cumulative consumption + weight × terminal inventory) / horizon.

Weight 0 is focal consumption. Larger weights additionally value terminal inventory; they do not imply greater consumption.

Reused development seeds; no untouched test or institutional outcomes. All sensitivities and raw effect units are retained in the CSV tables.
