

What changes when the allocation planner learns?

Paired decision outcomes · identical planner and legal inputs · learned belief, frozen prior, known coefficients

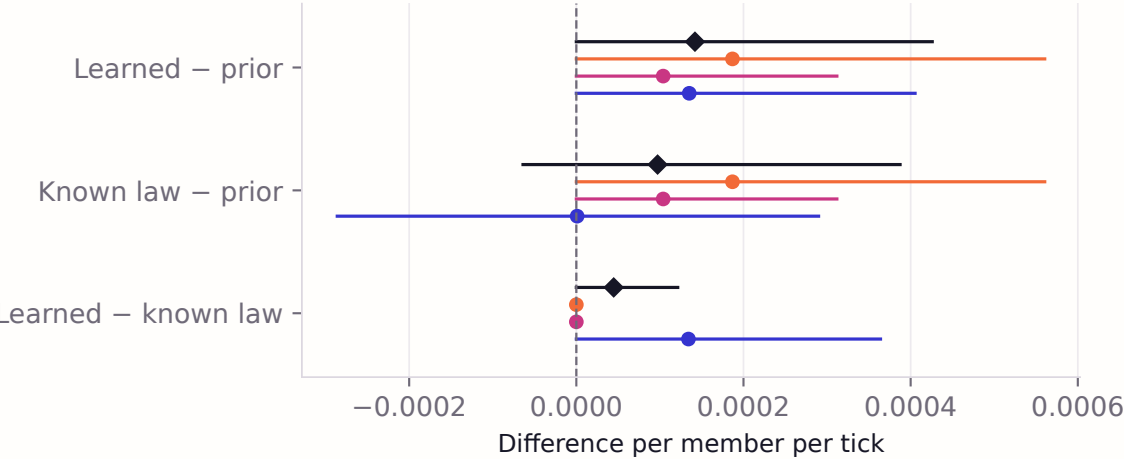

Private utility · primary endpoint

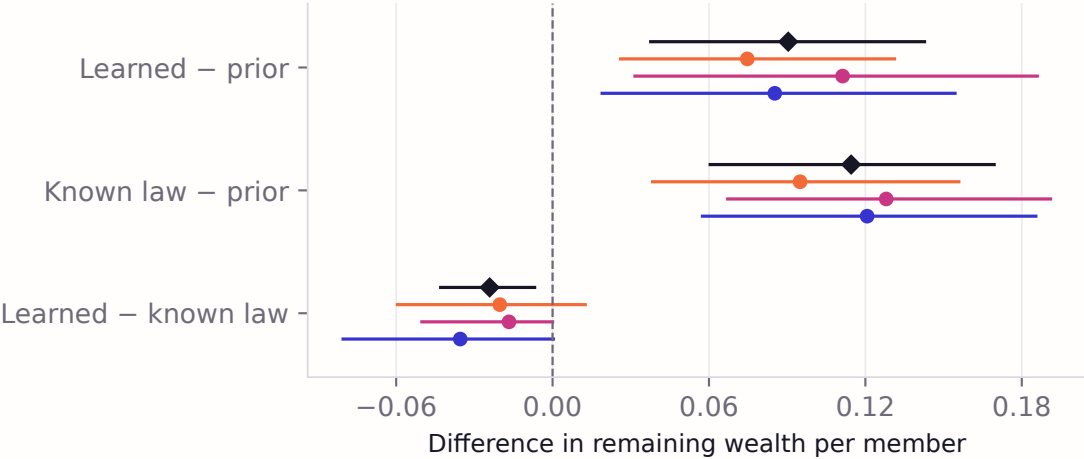

Consumption

Mean material welfare

Terminal wealth

24 independent arenas; three focal societies averaged within arena. Bars: 95% paired arena intervals.

Private utility = window consumption + 0.2 terminal wealth. A utility gain need not imply more consumption or welfare.

● Society 0 ● Society 1 ● Society 2 ◆ Mean of three focal societies
