

An exact counterfactual for drought damage

Same programs, initial conditions and exogenous draws · only the regeneration shock is disabled

A Overall welfare with and without drought

B Drought effect by environment/schedule tuple

Coevolution – fixed-institution drought-effect contrast: +0.000938 welfare / member-tick.

Each environment mean groups 3 focal societies × 3 opponent panels. Dots show conditional variation, not confidence intervals.

One matched search pair; a less negative drought effect does not establish disturbance recognition or general adaptive learning.
