

Parameter uncertainty needs its own calibration check

Terminal 90% credible intervals at tick 128 · hidden coefficient values · 24 independent arenas

Dots: society estimates across arenas. Lines: 95% arena bootstrap intervals. Dashed line: nominal 90% coverage.

Pooled spillover coverage: 75.0% [95% interval 58.3%, 91.7%]. Parameter calibration needs further validation.

Forecast coverage and coefficient coverage are different. Repeated prior and pooled copies add no independent evidence.
